

Fastener Guide from REYHER

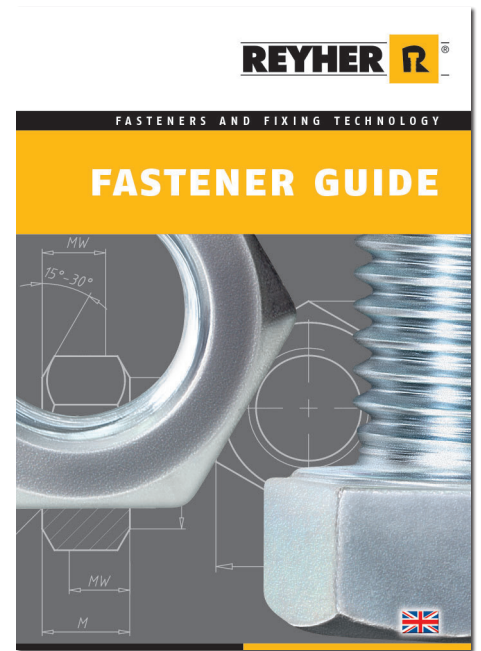

F. REYHER Nchfg GmbH & Co KG has upgraded its comprehensive Fastener Guide to include helpful hints on corrosion protection and other technical information.

The new edition covers standard items, complemented by many ISO standard items; followed by updates for the most important non-standardised products. There is also the fixing technology chapter, which is characterised by many brand name products.

As corrosion protection coatings for steel fasteners are widely used, the Fastener Guide also gives information on all common coatings including zinc plated, hot dip galvanised and zinc flake. In addition technical references give advice on which properties and conditions should be taken into consideration when looking for products.

The Fastener Guide also has a summary of relevant technical information to support buyers, as well as technicians and designers, in their choice of products. These include detailed information from standard conversions, guidelines and legal requirements to shapes, sizes and finishes for fasteners.

VIPA supplies worldwide

Operating since 1970, VIPA SpA says it can now export its wide range of products including high strength bolts, socket head screws and rods and wedge anchors to 50 countries worldwide.

VIPA has also expanded its product range with the development of its high-tensile strength range, which now includes articles in Class 8.8, 10.9 and 12.9, as well as hexagon head bolts, socket head screws, and bolts for heavy carpentry – all with nuts and washers.

The company also offers a wide range of newly introduced sealing rings in stainless A2 and A4, brass, aluminium, polymer and ferrous classes of lower resistances.

Headquartered in Rolo, Italy, VIPA's facility covers approximately 130,000m² – made up of its main office building and automatic warehouse and is capable of storing up to 120,000 pallets.

"VIPA offers a wide range of quality products for all your needs and also undertakes special parts upon request; fitting all needs for mechanics, construction, furniture, food and hobby."

In-house coatings from Growermetal

Growermetal Srl has installed a new and fully automatic coating line that will enable it to supply products with zinc flake coatings to guarantee its customers maximum flexibility.

Growermetal's coating line has been specifically designed and constructed for carrying out surface coatings on washers, in order to achieve the best results both from an aesthetical point of view and in performance.

The company uses exclusively original Dörken products that ensure high-quality and high performance coatings and will be able to offer a choice of different solutions of base coats such as DELTA-PROTEKT® and DELTA-TONE®, as well as a range of top coats including the DELTA-PROTEKT® VH range.
