

→ **Growermetal** Flagship products, application solutions and exclusive new technologies
Hall 3, Stand 2208

From the 21st-23rd March 2023, Growermetal will be back in Germany for Fastener Fair Global in Stuttgart. Following the reopening of the local and international trade fairs, this year the Italian fastener business is going to introduce new exclusive technologies developed by its R&D team.

"As producers of safety washers, we are constantly focused on innovation in order to enhance safety in every sector or application," comments Paolo Cattaneo, CEO of Growermetal. "The expansion of our washer range is an essential part of this process together with the investments in new technologies and the achievement of important certifications."

With the launch of the exclusive technology of Grower TenKeep® in 2019, the foundation of the JRC MATT in 2020, obtaining the quality management system certification EN 9100:2018 standard in 2021 and the presentation of Grower SpheraTech® last year, the period before and after the pandemic outbreak has been particularly significant for the company, in spite of the difficulties of the market.

The overview on the main trends of the fastener and fixing industry offered by the Fastener Fair Global, characterised by the presence of some of the most important companies of the sector, will be the perfect context to introduce the new products to the distributors, suppliers and visitors that will take part in the event, says Growermetal

"As in the past trade fairs, our flagship products will be displayed at our booth, so the new technologies will be

available to our guests together with our complete washer range," adds Cattaneo.

Among the products, there will be Grower TenKeep®, a flat washer with surfaces of different knurls, characterised by excellent performance even in presence of dynamic loads or extreme vibrations. By its side there will be also Grower SpheraTech®, an inseparable set made from the combination of a spherical (top) washer and a conical seat (down) washer which guarantees a safe locking function on non-parallel bearing surfaces, avoiding damages or breakages of the bolted joint connection thanks to an angle of inclination up to three degrees.

In addition, visitors will have the opportunity to explore the wide variety of solutions offered by Growermetal: from railway to aerospace, from power generation to automotive, including solutions for infrastructures, industry, electromechanic and transport the range includes safety washers and blanked parts for any kind of application.

New products will take part in the showcase too, says Cattaneo: "During last year our R&D team worked in the development of new fastening technologies aimed at offering exclusive solutions to our sector, which is more and more challenging."

"It confirms our company's commitment to the creation of added value for customers, through competitive tools based on innovation and inspired by their requests. We couldn't be happier with this result and to have the possibility to launch the new products during the next Fastener Fair Global."

We'll have to wait to find out more about the application fields and specific function of these new technologies: "We are in the final phases of the project, so everything is still top secret, but we can assure you that the quality is in line with the other products of Growermetal's range. We're looking forward to revealing the new designs and the fair in Stuttgart will surely be the perfect context for this occasion." To sum up: new technologies, innovative products and competitive services can be expected on the Growermetal stand in Stuttgart.
