## MORE THAN 7,000 WASHERS TO SUIT THE NEEDS OF THE GLOBAL MARKET

Founded in 1950 by Virginio Cattaneo, Growermetal is a renowned safety washer manufacturer with a production that addresses the major areas of the world. Run by the Cattaneo family since the beginning, in 2021 the Italian company saw a significant change in its corporate structure, with the introduction of new managing professionals that have contributed to the growth of the business in recent years, bringing the solid name of the company in different application fields.

Thanks to the high request of Growermetal's parts within a variety of sectors, its market has recorded a constant expansion across Europe and the world, from the foundation of Growermetal USA, the North American sales office located in Cleveland (Ohio) in 2014, followed by the inauguration of Growermetal do Mercosul Ltda in Curitiba (Brazil) in 2015.

Opening domestic production to the overseas markets, the company has not only affirmed its role as a leading European fastener producer, but seized the opportunity to provide its services globally.

Today, Growermetal's washers can be found in many industries, ranging from the railway, aerospace and automotive sector to power generation, construction, oil&gas, electromechanical, transportation and earth-moving machines. One of the main strengths of the Italian manufacturer lies in its wide product range, which includes over 4,500 standard washers, manufactured according to DIN, UNI, ASME, NFE and other international standards. Divided into two main families of products – blanked parts and products made of wire – the line includes washers with internal or external teeth, conical elastic washers, flat washers, coiled spring washers, spring washers for railway applications, corrugated washers, electric terminal washers, spherical washers, sealing push-in caps and other exclusive designs. All the parts are available in different materials, including carbon steel, stainless steel, aluminum, bronze, copper

and other alloys and raw materials upon customers' requests.

But that's only one part of the opportunities offered by the company. Growermetal is able to provide exclusive designs and items according to customers' drawings and specifications, thanks to its team of engineers and experts that study the part, check the feasibility and manufacture the products in competitive timing. In addition to standard washers, today the company manufactures more than 2,500 different special parts, counting an overall production of more than 7,000 items, all made in Italy and all produced for the European, US and Canadian markets.

The in-house production plays a key role in this service, as it allows Growermetal to deliver surface treatments, coatings and testing, combined with the internal tool shop, the R&D laboratory and the fully automated warehouse. A system in line with the latest regulations and norms, with a quality management system certified according to the IATF 16949, EN 9100, ISO 9001, ISO 14001 and ISO 45001.

By combining the wide product portfolio, structured manufacturing processes and flexible and reliable delivery services, Growermetal has shaped its medium-term and long-term strategy. Everything, with a specific goal: boost business growth, and create value for the company and for its customers. 

# YOUR EUROPEAN PARTNER IN FASTENING SOLUTIONS

**MORE THAN 7.000 WASHER
